

TIMKEN® CYLINDRICAL ROLLER BEARINGS

SINGLE-ROW EMA SERIES

HIGH PERFORMANCE

At Timken, our brand stands for outstanding quality in everything we do, from product design and manufacturing to engineering support and distribution. We believe in providing customers with the highest quality product solutions – and the greatest levels of service – for their application needs.

Our dedication to high quality solutions is the inspiration for our new line of cylindrical roller bearings. Timken's single-row EMA series features an increased capacity design with a machined brass cage. This premium design outperforms both the Timken published ratings and the industry's leading high-performance design to provide longer bearing life.

IS OUR STANDARD

Timken's cylindrical roller bearing line is one of the broadest in the industry, backed by everything you need to improve your equipment and business performance. Timken industry experts, a global distribution network and an unwavering commitment to quality all combine to help you improve uptime and achieve the most from your operations.

INDUSTRY EXPERTS

Timken engineers lead the industry in bearing design and application support. Every high-performance Timken® cylindrical roller bearing comes with our Timken team of experts, providing you with the industry's best design, application and 24/7 field engineering support from around the globe.

GLOBAL DISTRIBUTION NETWORK

Our technical centers and manufacturing plants are supported by our worldwide distribution operations, which provide customers everywhere with easy access to Timken products and services.

QUALITY YOU CAN TRUST

Timken is the only premium bearing manufacturer in the world that manufactures super-clean, high-alloy bearing steel, and we apply this knowledge of superior quality materials to every bearing we make. In addition, Timken Worldwide Quality Standards are implemented in every manufacturing facility, so each bearing meets the same performance standards – no matter where in the world it is manufactured.

THE TIMKEN DIFFERENCE

- **Timken standard designs are high performance** – in fact, our new single-row EMA series offers greater performance than the Timken-published ratings and the leading high-performance industry design.
- **Our material quality is second to none** – 90+ years of steelmaking expertise is integrated into the material selection of every bearing we make.
- **Timken experts are your experts** – customers worldwide leverage our technical experience to improve performance in their own operations.

PERFORMANCE

We've applied more than 80 years of cylindrical roller bearing design and manufacturing experience to achieve the highest levels of performance in the industry. In fact, Timken tests indicate that our new EMA series of cylindrical roller bearings offer greater performance than the Timken-published ratings and the leading high-performance industry design.

EMA SERIES LIFE TEST RESULTS

Cylindrical roller bearing life testing was conducted on similar products under elevated loads and temperatures. Conditions were selected to provide a performance comparison that demonstrates the life improvements offered by the design, material, surface profiles and surface textures of Timken's single-row EMA series cylindrical roller bearings. The data presented is based on Weibull analysis using 65 percent confidence bounds.

THAT RAISES THE BAR

INNOVATIVE DESIGN

From a unique cage design to our proprietary internal geometries and special surface textures, Timken® single-row EMA series cylindrical roller bearings feature unique characteristics designed to increase load ratings – resulting in longer life, improved uptime and reduced maintenance costs.

PREMIUM CAGE

Our EMA series bearings include a one-piece brass cage with a full-milled pocket design. The first of its kind in the industry, this Timken innovation is a land-riding cage which, unlike traditional roller-riding cages, minimizes drag on the roller elements. This helps reduce heat generation and improve bearing life. Compared to a two-piece cage design, our one-piece open pocket cage also reduces heat and wear by enhancing lubrication flow. The high cage rigidity allows for more rollers than possible with other brass cage configurations.

UNIQUE INTERNAL GEOMETRIES

Proprietary profiles on the races and rollers increase load capacity over other competing designs.

ENHANCED SURFACE TEXTURES

Engineered process for rings and rollers enhance surface textures for smoother operation, reducing friction, lowering operating temperatures and promoting longer bearing life.

In fact, surface textures on Timken's EMA series bearings nearly double the operating contact lambda ratio, resulting in a 1.5 times increase in predicted bearing life under severe operating conditions.

COMPACT DESIGN

Just as with every other Timken bearing design, our EMA series bearings are engineered for the greatest performance in the smallest design envelope possible. This helps original equipment manufacturers reduce their capital investment costs by building smaller equipment. It also contributes to more lightweight equipment, which can help end users reduce energy consumption.

TIMKEN® SINGLE-ROW EMA SERIES CYLINDRICAL ROLLER BEARINGS

Timken's single-row EMA series of cylindrical roller bearings is available in a wide variety of size ranges and configurations to meet various application requirements.

Size ranges: 80 mm ID - 400 mm OD | **Designs:** N, NU, NJ, NUP | **Common applications:** wind energy, metals, construction, mining, pumps, hoists, gear drives and other industrial equipment

TYPE NU

The most popular cylindrical roller bearing design, Type NU may be used in one or two positions for shaft support if other means of axial location are provided. The outer ring has two

integral ribs while the inner ring has a cylindrical outer diameter without ribs. This type is not designed for any thrust load.

TYPE NJ

Type NJ has double-ribbed outer and single-ribbed inner rings and can support heavy radial loads, as well as light unidirectional thrust loads up to 30 percent of the radial load.

TYPE N

Type N bearings may be used in one or two positions for shaft support if other means of axial location are provided. The outer ring has a cylindrical bore without ribs and the inner ring

incorporates two ribs. This type is not designed for any thrust load.

TYPE NUP

Type NUP has a double-ribbed outer ring and a single-ribbed inner ring with an abutting loose rib, allowing the bearing to provide axial location and to carry light thrust loads in both directions.

RADIAL INTERNAL CLEARANCE CODES

Timken cylindrical roller bearings are available with the radial internal clearance (RIC) designations specified below. When placing an order, the desired RIC code (C2, C3, C4, C5) must be added to the part number following all other suffixes.

Bore (mm)		Radial Internal Clearance (Straight Bore)									
Over	Inclusive	C2		Normal		C3		C4		C5	
		Max.	Min.	Max.	Min.	Max.	Min.	Max.	Min.	Max.	Min.
